All,

The work was completed safely and they are currently at Leviathan Mine and 395. Everyone is safe and all tasks were completed!

Mike

Subject: LMS- LAS ASB Treatment System Site Objective Memo - April 06, 2017 Enhanced Scouting and Pond 4 Effluent Launder Troubleshooting

Team,

We will be performing an enhanced scouting trip to the ASB Treatment System on Thursday, April 06, 2017. The purpose of this trip will be to assess whether or not we can achieve safe access to the site using the Nevada access roads, installation of a temporary 2 inch Pond 4 effluent line to the aeration channel, syphon water from Pond 4 to the aeration channel to increase pond freeboard, clean Pond 3 and 4 launder screens, and manually measure treatment system influent and effluent flow rates.

The enhanced scouting team will meet at the intersection of US Hwy 395 and Leviathan Mine Road at 7:30 am Thursday morning. If the scouting team cannot safely access the site or if any other conditions arise that will not allow for safe access, we will "Stop Work" and reschedule the enhanced scouting trip.

The tasks for the enhanced scouting site visit are in the attached Site Objective Memo, please note the attached pre-mobilization checklist as well and bring to the morning safety meeting prior to the scouting trip.

Thanks,

Andy
